

Day 01 - AI Agent QA Portfolio

Project

VOC Improve QA Project

Learning Summary

- Understood multi-agent architecture (Interpreter, Retriever, Summarizer, Evaluator, Critic, Improver).
- Learned MCP server and gRPC communication.
- Studied QA quality criteria: functionality, connectivity, data quality, AI response quality, fault tolerance, and operations.
- Learned test case design and quality scoring.

Practical Activities

- Environment setup
- Agent execution plan
- MCP registration flow
- QA verification process

Issues to Check

- Summarizer timeout
- Agent connection validation
- LLM Judge integration

GitHub Portfolio Note

This PDF can be committed together with README.md as daily learning evidence. Additional lecture notes can be accumulated and a final portfolio PDF will be generated at the end of the day.
